Boolean Logic

MAKING DECISIONS WITH JAVASCRIPT

COMPARISONS

```
> // greater than  
< // less than  
>= // greater than or equal to  
<= // less than or equal to  
== // equality  
!= // not equal  
=== // strict equality  
!== // strict non-equality
```

SOME EXAMPLES

```
10 > 1;      //true
0.2 > 0.3;   //false
-10 < 0;     //true
50.5 < 5;    //false
0.5 <= 0.5;  //true
99 >= 4;     //true
99 >= 99;    //true
'a' < 'b';   //true
'A' > 'a';   //false
```

Notice these all return a Boolean!

Though it's uncommon, you can compare strings. Just be careful, things get dicey when dealing with case, special characters, and accents!

==

VS

==

`==` (double equals)

- Checks for equality of value, but not equality of type.
- It coerces both values to the same type and then compares them.
- This can lead to some unexpected results!

== WEIRDNESSS

```
5 == 5;           //true
'b' == 'c';       //false
7 == '7';         //true
0 == '';          //true
true == false;    //false
0 == false;       //true
null == undefined; //true
```

TRIPLE EQUALS

```
5 === 5; //true
1 === 2; //false
2 === '2'; //false
false === 0; //false

//Same applies for != and !==
10 != '10'; //false
10 !== '10'; //true
```

CHECKS FOR EQUALITY OF VALUE AND TYPE

console.log()

prints arguments to the console

(we need this if we're going to start working with files!)

Running Code From a File

app.js

```
//Put your code in the JS File
alert('Hello from JS!');

//Won't show up!!
"hi".toUpperCase();

//Will show up!
console.log("hi".toUpperCase());
```

Write your code
in a .js file

demo.html

```
<!DOCTYPE html>
<html>
<head>
  <title>JS Demo</title>
  <script src="app.js"></script>
</head>
<body>

</body>
</html>
```

Include your script
in a .html file

Conditionals

MAKING DECISIONS WITH CODE

IF STATEMENT

Only runs code if given condition is true

```
let rating = 3;  
  
if (rating === 3) {  
  console.log("YOU ARE A SUPERSTAR!");  
}
```

ELSE IF

If not the first thing, maybe this other thing??

```
let rating = 2;  
  
if (rating === 3) {  
  console.log("YOU ARE A SUPERSTAR!");  
}  
else if (rating === 2) {  
  console.log("MEETS EXPECTATIONS");  
}
```

ELSE IF

We can add multiple else ifs!

```
let rating = 1;

if (rating === 3) {
  console.log("YOU ARE A SUPERSTAR!");
}
else if (rating === 2) {
  console.log("MEETS EXPECTATIONS");
}
else if (rating === 1) {
  console.log("NEEDS IMPROVEMENT");
}
```

ELSE

If nothing else was true, do this...

```
let rating = -99;

if (rating === 3) {
  console.log("YOU ARE A SUPERSTAR!");
}
else if (rating === 2) {
  console.log("MEETS EXPECTATIONS");
}
else if (rating === 1) {
  console.log("NEEDS IMPROVEMENT");
}
else {
  console.log("INVALID RATING!");
}
```

NESTING

We can nest conditionals inside conditionals

```
let password = "cat dog";
if (password.length >= 6) {
  if (password.indexOf(' ') !== -1) {
    console.log("Password cannot include spaces");
  }
  else {
    console.log("Valid password!!")
  }
}
else {
  console.log("Password too short!");
}
```

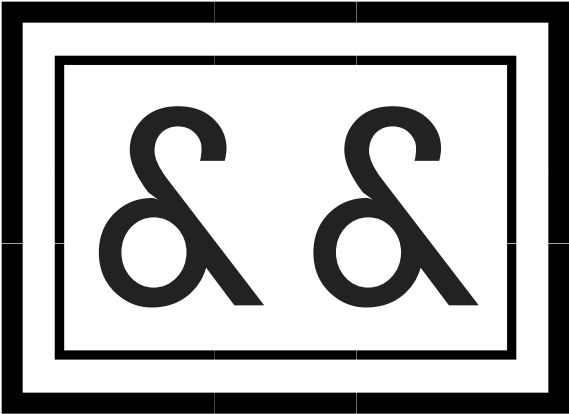

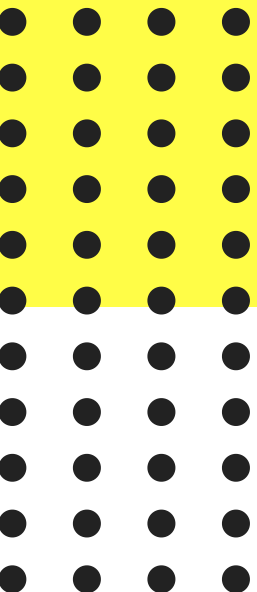

TRUTHY AND FALSY VALUES

- All JS values have an inherent truthiness or falsyness about them
- Falsy values:
 - false
 - 0
 - "" (empty string)
 - null
 - undefined
 - NaN
- Everything else is truthy!

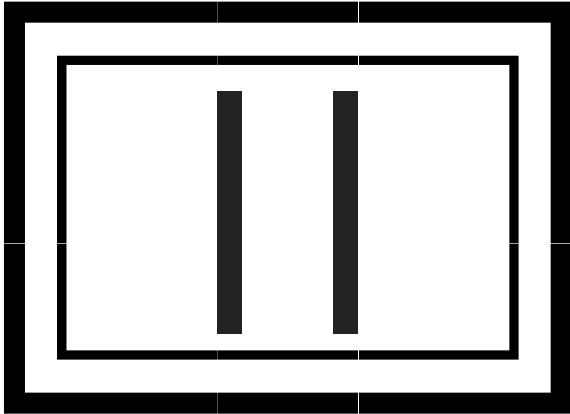

Logical Operators

COMBINING EXPRESSIONS

& &

||

!

AND

Both sides must be true, for the entire thing to be true

```
1 <= 4 && 'a' === 'a'; //true
```

```
9 > 10 && 9 >= 9; //false
```

```
'abc'.length === 3 && 1+1 === 4; //false
```

AND

Both sides must be true, for the entire thing to be true

```
let password = 'taco tuesday';

if(password.length >= 6 && password.indexOf(' ') === -1){
  console.log("Valid Password!");
}
else {
  console.log("INVALID PASSWORD!");
}
```

OR

If one side is true, the entire thing is true

```
//only one side needs to be true!
```

```
1 !== 1 || 10 === 10 //true
```

```
10/2 === 5 || null //true
```

```
0 || undefined //false
```

OR

If one side is true, the entire thing is true

```
let age = 76;

if(age < 6 || age >= 65){
  console.log('You get in for free!');
}
else {
  console.log('That will be $10 please');
}
```

NOT

!expression returns true if expression is false

```
!null //true  
  
! (0 === 0) //false  
  
!(3 <= 4) //false
```
